

SAGE

HERBS

Salvia officinalis. Hardy evergreen. Oval grey-green wrinkled leaves. Use: Sage can be used to flavour almost all kinds of meat and poultry. It is best known as an addition to poultry stuffings

Length Plant IE :	60 cm
Sowing period :	March (under glass) or April - May (outdoor)
Seeds Per 10 Gr IE :	1,000-1,500

TSW: 5-7 g

Seed amount: Pots 100g/1000 pots

Direct seeding 120-150g/100M²

Germination: 10-21 days. Requires light for germination

Cultivation: Prick out to beds 8 cm apart. Transfer to final site in September, 45 cm apart

It is commonly propagated by root division, but taking stem cuttings will also work

Sage prefers well-drained average soil and a sunny situation, although it does appreciate some afternoon shade in very hot areas
